

Station square, Sankt Gallen (CH)

Application: Support and compensation plates, bus stops
Client: City Sankt Gallen
Object: Station square Sankt Gallen
Country: Switzerland
Year: 2015
Fiber: Concix and Fibrofor High Grade

Short description

Rebuilding of the railway station in St. Gallen. The wearing plate of the tracks as well as the compensation plates and the bus stops, all highly stressed surfaces, have been rebuilt, whereby durability was important.

Benefit of the solution with Concix and Fibrofor High Grade:

- No time - and cost-intensive laying of conventional steel reinforcement under the tracks
- Lower costs for the reinforcement due to the replacement of steel
- Long-lasting and durable (no corrosion)
